Hello.

Here is submission summary.

Track Name: IntCST2026

Paper ID: 364

Paper Title: Predicting Student Depression with Machine Learning

Abstract:

Abstract– Student Depression is becoming increasingly apparent nowadays, particularly due to mounting academic pressure and personal issues. This work examines the use of machine learning for forecasting early depression symptoms in students from an analysis of behavior, educational history, and social patterns. We applied data collected through surveys and college records to train some models that were able to identify some patterns associated with depression. The ultimate objective was to design a system that would assist schools in catching struggling pupils early, thus enabling them to receive the needed support. The outcomes were promising, demonstrating that machine learning had a part to play in mental health tracking. Nevertheless, we also needed to consider factors such as student privacy and just how sensitive this type of information can be. Generally, the study suggests a useful tool that, if handled with care, could potentially bring about a positive impact upon how we assist student well-being differences in how we support student well-being.

Keywords– Depression Prediction; Student Mental Health; Machine Learning, Support Vector Machine, Logistic Regression, AdaBoost.

Submission Questions Response:

1. Conflict of interest
Agreement accepted
2. Status of using third-party material in your article.
I am not using third-party material for which formal permission is required.
3. Certificate of originality
Agreement accepted
4. Corresponding Author's Contact number
serena balyan 918433197630
5. Country Name
India
6. Authors Contributions

Ishan Sharma -The research idea and overall project planning.

Srishti Madaan-Dataset handling, data preprocessing, and literature survey manage.

Serena Balyan-worked on monitoring deployed machine learning models, concept drift analysis, and evaluation of performance degradation metrics

Pranshu-contributed to system implementation, visualization of monitoring results, and interpretation of experimental findings.

7. Conference Rules and Guidelines
Agreement accepted
